11th International Workshop on the Application of FPGAs in Nuclear Power Plants

Workshop Discussion on Practical Experiences from FPGA Projects

Sean Kelley
Chief Operating Officer

October 8-11, 2018
Dallas, Texas, USA

What did you consider the biggest benefit during the development process of an FPGA project?

What have been the biggest challenges on an FPGA project?

In what areas were FPGA projects easier than other digital projects? Harder?

From the end user/customer viewpoint, are there any challenges on an FPGA project as opposed to other digital projects? How well is FPGA technology understood?

Were project schedules on FPGA project longer or shorter than comparable non-FPGA digital projects? What areas were the most different than previous experiences?

If you could go back change one thing for a completed or ongoing FPGA project, what would it be?
